Designed for teaching astrophysics to physics students at advanced undergraduate or beginning graduate level, this textbook also provides an overview of astrophysics for astrophysics graduate students, before they delve into more specialized volumes. Assuming background knowledge at the level of a physics major, the textbook develops astrophysics from the basics without requiring any previous study in astronomy or astrophysics. Physical concepts, mathematical derivations and observational data are combined in a balanced way to provide a unified treatment. Topics such as general relativity and plasma physics, which are not usually covered in physics courses but used extensively in astrophysics, are developed from first principles. While the emphasis is on developing the fundamentals thoroughly, recent important discoveries are highlighted at every stage.

A unique tribute to art films as seen through the eyes of master cinematographer Vittorio Storaro, the winner of three Academy Awards. The

volume is a compendium of Storaro's extraordinary fifty-year career and a tribute to the creative sources of his work, as celebrated through more than 500 illustrations that reflect his singular style. In cinematography, there is not just one kind of light, but an infinite range of variants: not only the day and night specified in the screenplays, but also the daylight and artificial light, the darkness and the twilight, the sunrise and the sunset, the sun and the moon. And each one tells a story, expresses an idea or an emotion, and digs down into the subconscious. "The Muses" are the female figures of Greek mythology who have inspired the cinematography of Storaro in terms of aesthetics, light, color, and value.

"Solveig Hisdal is not only aware of the knowledge housed in Norway's museums, she has also learned how to use it. She has visited museums throughout the country, searching eagerly for the treasures that her ancestors left behind. She has found textiles, chests, cabinets and old folk costumes that have later become her greatest source of inspiration. This book is a result of her quest, and it shows how the creativity of the past has inspired her to make beautiful knitted designs. It contains wonderful knitting ideas for almost all occasions, from a child's christening outfit to an exquisite, knitted bridal cardigan with beads and silk. Whether you wish to be inspired by the beautiful pictures, or knit some of the outfits -- enjoy the book!"--P. [4] of cover.

A comprehensive, richly illustrated appraisal of the life of this automotive design giant. Few automotive designers have as impressive a resume as Tom Tjaarda. Among automotive enthusiasts, his name is synonymous with the De Tomaso, Ferrari, Fiat, Ford, Innocenti, and Lancia marques, but he also is responsible for the successful workaday Ford Fiesta. Raised in Detroit when the American Dream was beating out its rock 'n' roll rhythm, Tjaarda moved to Europe, where he had a ringside seat at the heart of automotive styling activities in the Mecca of vehicle design, Turin, in its heyday. The lessons he learned there helped make him one of the most influential and important designers of the second half of the twentieth century. Tom Tjaarda: Master of Proportions is a comprehensive, richly illustrated appraisal of the life of this design giant, featuring all his designs, both automotive and in other fields.

Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, or lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.
