Respiratory Care Cardiopulmonary Anatomy and Physiology is a comprehensive, highly illustrated text with a strong emphasis on cardiovascular and pulmonary physiology, acid/base balance, and blood gas interpretation.

A text that truly embodies its name, CHEMISTRY: PRINCIPLES AND PRACTICE connects the chemistry students learn in the classroom (principles) with real-world uses of chemistry (practice). The authors accomplish this by starting each chapter with an application drawn from a chemical field of interest and revisiting that application throughout the chapter. The Case Studies, Practice of Chemistry essays, and Ethics in Chemistry questions reinforce the connection of chemistry topics to areas such as forensics, organic chemistry, biochemistry, and industry. Colorful graphics and 19 chapters featuring such learning aids as "chemistry at work" and conceptual problems characterize this large text on a large subject. Cited by the American Association for the Advancement of Science for his pioneering work in the chemistry of ylides, Johnson (who spent most of his career at the U. of North Dakota), explores the smorgasbord of subject matter that is organic chemistry and new developments in the field. Appends a summary of nomenclature, spectra group assignments, and values of selected important compounds. The index is combined with a glossary. This book, "A Whole Year of Chemistry Sentence Starters" was written to provide easy to use sentence starters to assess the comprehension of honors students, Advance Placement students (AP), and International Baccalaureate (IB) students. The 25 chapters of sentence starters have a total of 250 comprehensive chemistry sentence starters that guides the teacher and the student through what is required in a non-watered-down chemistry course that leads students towards test and college readiness. These sentence starters will add a resource that prepares students for the formative assessment associated at the end of all chapters. The 25 chapters include topics that are covered in the honors chemistry setting as well as specialty topics like thermodynamics, kinetics, rates of reactions that are seen in the Advance Placement classes. Included within this book are quizzes for the International Baccalaureate teacher that wishes to test students on environmental chemistry as well as biological and food chemistry. This is a book that was written to fill the void of valuable resources needed for novice and experienced teachers in institutions that continually push for more summative assessments, higher DOKs, and rapid feedback, while limiting preparation time. As a teacher for over 25 years, I know that any well outlined, structured, and comprehensive resource saves time in additional planning, searching, and preparing. Use this book to help you identify and test students on topics that are important to their comprehension and success with their final test.

This text is divided into three parts. The first part describes basic toxicological concepts and methodologies used in aquatic toxicity testing, including the philosophies underlying testing strategies now required to meet and support regulatory standards. The second part of the book discusses various factors that affect transport, transformation, ultimate distribution, and accumulation of chemicals in the aquatic environment, along with the use of modelling to predict fate.; The final section of the book reviews types of effects or endpoints evaluated in field studies and the use of structure-activity relationships in aquatic toxicology to predict biological activity and physio-chemical properties of a chemical. This section also contains an extensive background of environmental legislation in the USA and within the European Community, and an introduction to hazard/risk assessment with case studies.
