In the basic-needs approach to development, the function of target setting is to raise minimum levels of basic-needs satisfaction in specific fields and, where possible, to avoid widening the gap between rich and poor. Conversely, the satisfaction of basic needs through government services implies the setting of targets by which policy may be oriented and performance may be measured. In this book the authors concentrate on four major sectors of activity in government services-health, education, housing and transport-and, by analysing the operations involved in these sectors, discuss relevant a. Recent advances in the field of nuclear medicine (NM) are expanding the role and responsibilities of the nuclear medicine technologist (NMT) to include more complex and detailed tasks. New technologies are making the diagnosis, management, and treatment of illnesses more sensitive, more specific, more accurate, and ultimately safer for both the patient and the technologist. Radiation Safety in Nuclear Medicine, Second Edition provides the latest technological advances and expanded responsibilities of today's NMT while laying a solid foundation for understanding the basic physics behind the technology. As with the original, this edition teaches the units of radioactivity, exposure, and dosimetry, along with the principles of instrumentation needed for detection and measurement. Focusing on the issues of safety, this volume devotes considerable attention to the

science and practice of safety techniques and includes information on rules and regulations. In keeping with the expanding nature of the field, the second edition incorporates many updates and additions such as, Recent modifications to the U.S. Code of Federal Regulations specific to the use of radiopharmaceuticals in medicine The growing popularity of metabolic imaging with positron emissions tomography (PET) The benefits of merging two modalities, namely, the images of PET and computerized tomography (CT) into one short scanning procedure The new role of therapeutic radiopharmaceuticals that use molecular targeting as a method of localization Providing a basic understanding of nuclear medicine, its scientific basis, diagnostic and therapeutic applications, safety practices and regulations, and future directions, Radiation Safety in Nuclear Medicine, Second Edition is the comprehensive reference for technologists, students, researchers, and other professionals in the Nuclear Medicine.

Land Policy and Urban Growth explores the relationships between urban growth patterns, land prices, and land policies in countries with market economies. The effects of the peculiar character of the private land market on land prices are discussed, along with the link between market mechanisms and government intervention in the urban-growth process. Comprised of 18 chapters, this book begins with a brief survey of patterns of urban growth, with emphasis on the high rate of urban expansion and what future land needs might be in urban areas. The next section is concerned with urban land prices in industrialized and developing countries and

highlights the dramatic increases in urban land prices arising from urban development. Various theories of urban land-price formation are examined, together with public policies on urban land and their impact not only on the land market but also on land supply and allocation. Finally, some alternative urban land policies are outlined. This monograph will be of interest to policymakers involved in land use and urban planning.

Optical and Molecular Physics: Theoretical Principles and Experimental Methods addresses many important applications and advances in the field. This book is divided into 5 sections: Plasmonics and carbon dots physics with applications Optical films, fibers, and materials Optical properties of advanced materials Molecular physics and diffusion Macromolecular physics Weaving together science and engineering, this new volume addresses important applications and advances in optical and molecular physics. It covers plasmonics and carbon dots physics with applications; optical films, fibers, and materials; optical properties of advanced materials; molecular physics and diffusion; and macromolecular physics. This book looks at optical materials in the development of composite materials for the functionalization of glass, ceramic, and polymeric substrates to interact with electromagnetic radiation and presents state-of-the-art research in preparation methods, optical characterization, and usage of optical

materials and devices in various photonic fields. The authors discuss devices and technologies used by the electronics, magnetics, and photonics industries and offer perspectives on the manufacturing technologies used in device fabrication.

Robert Peurifoy was a giant in the field of construction engineering and authored several books during his lifetime. This book last published in 1989 and will capitalize on the well-known name of the author. In this edition, computer calculations of costs and of modeling have been added as well as updated statistics, computer related examples and new problems. Civil, Environmental, and Construction Management Engineering Majors and Professionals will benefit from having this title on their shelf. This edition retains the conceptual strengths of the Peurifoy approach and organization from the previous edition but the new problems and computer-based examples and new up-to-date construction data make it the only choice in academia or industry.

Informal settlements are a shameful feature of poverty and inherited inequalities in South Africa. Defined in this book as 'settlements of the urban poor developed through the unauthorised occupation of land', they are regarded by many as unhealthy and overcrowded blights on the urban landscape 'squatter camps' in common parlance. Yet census data tell us that 16.4% of households across the country live in informal settlements, mostly in urban areas where an insecure foothold on the land enables these households to access the economic opportunities, social and economic networks and basic amenities that are essential to their survival.

Derived from the content of the respected McGraw-Hill Dictionary of Scientific and Technical Terms, Sixth Edition, each title provides thousands of definitions of words and phrases encountered in a specific discipline. Planning, programming, financing and administration of maintenance are beyond its scope. Usually, money for pavement maintenance is limited and the maintenance man is called upon to "make one dollar do the work of two;" this is not easy. Large differences in soil types, climate, terrain, traffic and other factors make for greatly varying problems, even within small areas. Some regions are rugged and mountainous while others are fairly smooth and level; some have heavy rainfall, others are semi-arid; some highways and streets must accommodate vehicles carrying coal, ore, logs, or other heavy loads, while others are subjected to only light-weight traffic.

Ide Penulisan Buku Program-Program Pemberdayaan Masyarakat di Sulawesi Tengah: Membangun Paradigma Berbasis Modal dan Paradigma Berbasis Nilai terlontarkan pertama kali dari ngobrol penulis dengan Mas Yanto panggilan akrab Ahmad Sriyanto, bung Acip panggilan akrab Tasrief Siara dalam perjalanan Luwuk-Palu di Tahun 2004 tepatnya antara desa Salodik dan Sabo di pagi hari yang cerah. Penulis ingat betul, ketika topik sampai pada pembicaraan kegagalan dan keberhasilan beberapa program yang pernah digeluti oleh kedua kawan tersebut, baik sebagai konsultan maupun jurnalis pemantau yaitu Sulawesi Agriculture Area And Development Project (SAADP) dan Program Pengembangan Kecamatan (PPK), kedua kawan

tersebut melontarkan omongan pembuka mengapa di Bualemo, Ampana Tete, Ampana Kota, Unit Pengelola Keuangan Desa (UPKD)-SAADP dapat berhasil dan mengapa di Pamona Selatan, Balantak, Lamala kurang berhasil? Mengapa pula PPK dapat berhasil dalam revolving fund di wilayah Banawa saat bung Acip memantau? Penulis melontarkan jawaban walaupun belum tentu mengena yaitu boleh jadi masyarakatnya mau berubah dan ingin mengubah nasibnya seperti di dalam Surat AR-Rad Ayat 11 “Allah Tidak Akan Mengubah Nasib Suatu Kaum Apabila Kaum Tersebut Tidak Mengubah Nasibnya”, atau karena kondisi alamnya memang membuat orang harus berubah karena tidak ada yang dapat diandalkan seperti di Mamboro yang menyebabkan penduduknya harus sekolah karena dorongan alam. Mungkin saja karena di Bualemo etnisnya dominan transmigran asal Jawa yang mempunyai etos kerja yang tinggi, sedangkan di Lamala dan Pamona Selatan adalah dominan penduduk asli yang menguasai aset atas tanah, dimanja alam, kemungkinan tidak pernah berpikir untuk dioptimalkan. Begitu banyak jawaban-jawaban yang muncul, tetapi belum memuaskan penulis untuk menggantinya lagi muncul pula pertanyaan apakah indikator keberhasilan program-program pemberdayaan masyarakat? Mas Yanto dan Bung Acip sepakat menjawab “itu dilihat dari segi pengembalian dana bergulir karena dana bergulir merupakan dana abadi desa atau macetnya perguliran dana”. Jadi ukuran keberhasilan dilihat dari revolving fund yang terjadi di masyarakat seperti yang dianalisis melalui pemantauannya di Kecamatan Banawa oleh bung Acip. GIDEON ebooks which explore all individual infectious diseases, drugs, vaccines, outbreaks, surveys and pathogens in every country of the world. Data are based on the GIDEON web application (www.gideononline.com) which relies on standard text books, peer-review journals, Health Ministry reports and ProMED, supplemented by an ongoing search of the medical literature. Chapters are arranged alphabetically, by disease name. Each chapter is divided into three sections: 1. Descriptive epidemiology 2. Status of the disease in Cambodia 3. References A chapter outlining the routine vaccination schedule of Cambodia follows the diseases chapters. There are 361 generic infectious diseases in the world today. 222 of these are endemic, or potentially endemic, to Cambodia. A number of other diseases are not relevant to Cambodia and have not been included in this book. In addition to endemic diseases, all published data regarding imported diseases and infection among expatriates from Cambodia are included.

The aim of this book is to offer advice and information on preparing and using estimates in the civil engineering industry. It deals with estimating at different stages of construction projects, and with the practice of estimating. "The essays in this book are drawn from the first international conference held in Singapore on the subject of Quality of Life in Cities. Grouped in three broad categories, the papers discuss issues of definition and measurement of quality of life in cities, quality of life studies conducted in particular countries and alternative perspectives and approaches for future quality of life study. The book seeks to introduce the reader to the breadth of critical issues and options available in the study of urban quality of life."--BOOK JACKET. First published in 2003. Hewett Cottrell Watson was a pioneer

in a new science not yet defined in Victorian times – ecology – and was practically the first naturalist to conduct research on plant evolution, beginning in 1834. The correspondence between Watson and Darwin, analysed for the first time in this book, reveals the extent to which Darwin profited from Watson's data. Darwin's subsequent fame, however, is one of the reasons why Watson became almost forgotten. This biography traces both the influences and characteristics that shaped Watson's outlook and personality, and indeed his science, and the institutional contexts within which he worked. At the same time, it makes evident the extent of his real contributions to the science of the plant ecology and evolution.

Malcolm Feeley's work is well-known to scholars around the world and has influenced two generations of criminologists and legal scholars. He has written extensively on crime and the legal process and has published numerous articles in law, history, social science and philosophy journals; two of his books, *The Process is the Punishment* and *Court Reform on Trials*, have won awards. This volume brings together many of his better-known articles and essays, as well as some of his lesser-known but nevertheless important contributions, all of which share the common theme of the value of the rule of law, albeit a more sophisticated concept than is commonly embraced. The selections also reveal the full range of his interests and the way in which his research interests have developed.

The bestselling author returns with his biggest book yet in which he teaches us the secret to living a happier life: get rid of as many expectations as possible—of ourselves, our future, our relationships, our career and our family. Expectations are the secret software, running on the hardware of our minds, controlling our emotions, decisions, and actions. How? Think about your life. How much of

the sadness you feel derives from what you think should have happened—than with what actually happened? Think about your career. How much of the discontent you feel comes from your belief about where you'd be at this point—than with the progress you've actually made? Think about your relationships. How much of your dissatisfaction with friends, family, significant others, or spouses has to do with your unspoken presumptions—than with the people themselves? Having so many expectations is distorting your perspective, decreasing your happiness and disrupting your joy. You can live a life of true freedom, greater peace and less stress: release as many expectations as possible. This, DeVon Franklin argues, is the secret to a better life now. In a culture obsessed with more, *Live Free* is a bold counterintuitive book that can start a cultural revolution, Franklin contends. Everyone struggles with unnecessary expectations. But once you learn to let go of them, you can set the stage for the life you've always wanted.

In this comprehensive guide to occupational safety and health (OSH or OHS), the authors have taken an international and holistic perspective, foregoing regional prescriptive models for a self-regulatory, risk management-based approach to health and safety at work. Both technical and human factors are considered in all areas of health and safety management - from hazardous substances and

radiation, noise and vibration, to ergonomics, stress, substance abuse, and violence. The book outlines strategies for managing workers' compensation claims and rehabilitation, and for assessing training needs and evaluating courses. It also explains how to implement an overall occupational health and safety management system in a company, integrating this into existing quality management programs. Each chapter includes a workplace application, further reading recommendations, and end-of-chapter questions, making this an ideal text for students on all health and safety related vocational and university courses. The book is also suitable for students on management courses, in which health and safety is being increasingly included in the syllabus. Managers, both general and health & safety professionals, will find this an invaluable international reference to the current concepts. * A comprehensive and practical guide to modern occupational health and safety * Examples from countries around the world provide valuable international comparisons, particularly useful for students and those working in multi-national companies and overseas * Companion website with references and up-to-date links to country-specific legislation is available at

"The Age of the Masters was the age of an architectural revolution that lasted over fifty years - from Charles Rennie Mackintosh's Glasgow Art School at the beginning of the century to Mies van der Rohe's National Gallery in Berlin at the end of the sixties. While they lived, the Masters comprised

some of the most powerful architectural talents the Western world has yet produced, and at least two men of towering genius - Frank Lloyd Wright and Le Corbusier. Their aspirations for the future of men, cities, and society may have been thwarted, but the prototypes they created still reflect the light of their creative fervor..." --

In the search for sustainable architecture, there is growing interest in the relationship between nature and design. In this vital new book, the term bioclimatic, relating to the dynamic between climate and living organisms, is applied by the authors in focusing on countries where housing requires cooling for a significant part of the year. In this context, Bioclimatic Housing covers creative, vernacular architecture to present both the theory and practice of innovative, low-energy architecture. The book interweaves the themes of social progress, technological fixes and industry transformation within a discussion of global and country trends, climate types, solutions and technologies. Prepared under the auspices of a 5-year International Energy Agency (IEA) project, and with case studies from Iran, Malaysia, Australia, Japan, Sri Lanka and Italy, this is a truly international and authoritative work, providing an essential primer for building designers, builders, developers and advanced students in architecture and engineering.
