Power in the Blood: A Family Narrative traces Linda Tate's journey to rediscover the Cherokee-Appalachian branch of her family and provides an unflinching examination of the poverty, discrimination, and family violence that marked their lives. Power in the Blood is a dramatic family history that reads like a novel, as Tate's compelling narrative reveals one

mystery after another. Innovative and groundbreaking in its approach to research and storytelling, Tate shows that exploring a family story can enhance understanding of history, life, and culture and that honest examination of the past can lead to healing and liberation in the present.

Unlike books currently on the market, this book attempts to satisfy two goals: combine circuits and electronics into a single, unified treatment, and establish a strong connection with the contemporary world of digital systems. It will introduce a new way of looking not only at the treatment of circuits, but also at the treatment of introductory coursework in engineering in general. Using the concept of "abstraction," the book attempts to form a bridge between the world of physics and the world of large computer systems. In particular, it attempts to unify electrical engineering and computer science as the art of creating and exploiting successive abstractions to manage the complexity of building useful electrical systems. Computer systems are simply one type of electrical systems. +Balances circuits theory with practical digital electronics applications. +Illustrates concepts with real devices. +Supports the popular circuits and electronics course on the MIT OpenCourse Ware from which professionals worldwide study this new approach. +Written by two educators well known for their innovative teaching and research and their collaboration with industry. +Focuses on contemporary MOS technology.

This book outlines a set of issues that are critical to all of parallel architecture--communication latency, communication bandwidth, and coordination of cooperative work (across modern designs). It describes the set of techniques available in hardware and in software to address each issues and explore how the various techniques interact.

Accessible to students and flexible for instructors, COLLEGE ALGEBRA AND TRIGONOMETRY, Seventh Edition, uses the dynamic link between concepts and applications to bring mathematics to life. By incorporating interactive learning techniques, the Aufmann team helps students to better understand concepts, work independently, and obtain greater mathematical fluency. The text also includes technology features to accommodate courses that allow the option of using graphing calculators. The authors' proven Aufmann Interactive Method allows students to try a skill as it is presented in example form. This interaction between the examples and Try Exercises serves as a checkpoint to students as they read the textbook, do their homework, or study a section. In the Seventh Edition, Review Notes are featured more prominently throughout the text to help students recognize the key prerequisite skills needed to understand new concepts. In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. Presented by Rena Petrello and Cengage Learning, these DVDs feature 10- to 20-minute problem-solving lessons, covering learning objectives from every chapter of their accompanying text. Currently teaching at Moorpark College in California (the same community college Rena attended as a student), Petrello initiated and developed the first online mathematics courses at her college. It was through the online teaching experience that Rena discovered the lack of suitable content for online instructors, which caused her to develop her own video lessons--and ultimately create this video project. Petrello's videos recently won her the Aurora Award for Platinum Best in Show for an Educational Video, as well as many other nominations. She has also received a tremendous amount of enthusiastic, positive feedback from students and colleagues.

The Student Solutions Manual provides worked-out solutions to the odd-numbered problems for each Problem Set. Additionally, the complete solutions are available for the Chapter Review, Chapter Test and the Cumulative Review.
