The book provides an overview of the various types of forests occurring in the Indian state of Karnataka. Some of the most magnificent tropical forests of the Western Ghats are found here, including evergreen, semi-evergreen, moist deciduous, dry deciduous, thorn, shola, swamp and mangrove. Although scattered information about these forests is available, such information for the whole state is not available in the form of a

comprehensive document. The book, while providing district-wise information about Karnataka's forests, also dwells upon the interplay of different factors that have led to the formation and transformation of these forests. It critically analyzes the salient features about tropical forests, their past management and present status; this is relevant not only to Karnataka's forests but also to the tropical forests of peninsular India, in particular, and Indian forests in general. The book provides a brief description about some 325 tree species—some endemic to the Western Ghats, some stretching from Australia to Africa and many pan-India—touching upon their ecology, habitat, field characteristics, tips for identification and utilization, including traditional medicinal uses. These trees represent a very wide spectrum of the trees from tropical forests.

Kim Smith makes a living as a professional decorator, but her real passion is her garden, a small and densely packed quarter acre beside her Gloucester seaside home, into which she has crammed nearly every species imaginable and a few (like apricots) that most of us would consider unimaginable. We are not going to claim that this is a book for all gardens and gardeners, but its twenty-two chapters really cover an immense amount of ground - all centered on the 5-6 coastal zones that cover most of the Eastern Seaboard from Georgia to Maine, while taking into account the expected vagaries of New England weather. This is a book that should appeal equally to serious gardeners interested in the specifics of varieties and cultivars that thrive in coastal zones and garden designers who want to learn more about what

lives best where. For Smith is wise in not writing merely about the plants, shrubs, and trees and their cultivation; this is a book as much about mood - about how to design and visualize a small garden - as it is about what varieties and cultivars to buy. Eclectic in its approach, incorporating quotations and citations from Eastern as well as Western sources, she challenges with the eye of an artist, but also with the down-and-dirty experience of someone wrestling with a small space, limited sunshine, the usual encroachments of blight, bugs, beasts, and the particular New England challenges of a relatively brief growing season and mediocre soil. Illustrated in full color with her own drawings, this is a book that should recommend itself to anyone who gardens in the coastal zones of the eastern United States. What Smith suggests has been tried and tested, and what she proposes is both sensible and sensitive.

Was escaping from the apocalypse a blessing or a curse? In the continent of cultivation, tens of thousands of cultivators cultivate in different ways. The rise and fall of a cultivator's fate, his life and death, was it unknown or was it stealthily manipulated? What was a Martial Saint? The many families had all grown up together, constantly changing their own perceptions and breaking through the boundaries of their cultivation realms. A thousand to follow the heart, the heart as long as the finger, the heart is empty, only to seek a solution, this life has no regrets. Welcome to visit (collect, recommend) [put away]
