The first soil survey in the Philippines was done by Mr. Clarence Dorsey, an American soil scientist in the province of Batangas in 1903. The Soils of the Philippines, however, is the first comprehensive summary of more than a century of soil-survey work in this country. It integrates the soil concepts of the reconnaissance soil-survey results, which commenced as early as 1934 and continued until the mid 1960s, with the semi-detailed soil surveys that continue to this day. The result is the first-ever genetic key for classifying Philippine soils at soil series level; thus, making it possible for any newcomers to the soil survey field to confidently produce their own soil map, at a more detailed map scale, to suit the project requirements. This book brings together discussions on soils and soil mapping units and up-to-date international techniques and technologies. It makes soils relevant to current political realities and national issues. As soil survey moves from a reductionist agricultural-development planning tool to a more holistic and integrated approach, to enable us to understand our dynamic and complex environment, The Soils of the Philippines will be the only source of authoritative and updated data on soil resources for macro-level resource management planning for decades to come. With a vanishing breed of experienced soil surveyors, not only in the Philippines but also worldwide, it may remain the only book on Philippine soils for the next hundred years or more. Since soils follow a geological and not a human time frame, the contents of this volume will stay relevant for soil surveyors even in a fast changing world. As the country leaps from an agricultural economy towards modernization and a more diversified economic base, some of the soil series in the Philippines, for example the Guadalupe series underlying the skyscrapers of Makati City, are becoming extinct as a result of urban development. Therefore, this book serves as the repository for the soils that we possess, the soils that have been lost through decades of urbanization while, at the same time, it creates a soil classification system for the soils we are yet to discover.

If anything is going to save the Little Fears from awful punch lines, it is not Hydra having an existential crisis. In Seeking Hydra, Great British groaners are the order of the day as the assembled Little Fears make their way through 90 tales of lemon trees, kinky behaviour, confused doors and mystical road hogs. Boxers seek a joke; Beat finds his pop; Sprite sees a Russian president; Lucy shoots a clay pigeon; Emu's tossed out of a club. Written and posted with scruffy illustrations daily on LittleFears.co.uk, these brief vignettes (50 to 100 words) chronicle the continuing adventures of the Little Fears. With only a sense of whimsy and a deep love of old British comedy, Seeking Hydra will make you groan, cry and laugh until a bit of wee comes out, in a truly original, unoriginal, work of art and fiction.
