Why Not? After all, no-one had ever done it before. It would be one of the longest of all overland journeys – half way round the world, from the English Channel to Singapore. They knew that several expeditions had already tried it. Some had got as far as the deserts of Persia; a few had even reached the plains of India. But no one had managed to go on from there: over the jungle clad mountains of Assam and across northern Burma to Thailand and Malaya. Over the last 3,000 miles it seemed there were 'just too many rivers and too few roads'. But no-one really knew ... In fact, their problems began much earlier than that. As mere undergraduates, they had no money, no cars, nothing. But with a cool audacity, which was to become characteristic, they set to work – wheedling and cajoling. First, they coaxed the BBC to come up with some film for a possible TV series.

They then gently persuaded the manufacturers to lend them two factory-fresh Land Rovers. A publisher was even sweet-talked into giving them an advance on a book. By the time they were ready to go, their sponsors (more than 80 of them) ranged from whiskey distillers to the makers of collapsible buckets. In late 1955, they set off. Seven months and 12,000 miles later, two very weary Land Rovers, escorted by police outriders, rolled into Singapore – to flash bulbs and champagne. Now, fifty years on, their book, 'First Overland', is republished – with a foreword by Sir David Attenborough. After all, it was he who gave them that film.

After the Second World War many American military vehicles become surplus stock and soon found their way into the hands of farmers and land owners across Great Britain. The subsequent heavy use and the real possibility of difficulties obtaining spares led Maurice Wilks, the Rover Car Company Chief Engineer, to design and build a replacement. Not only would the new Land Rover fill a gap in Rover's portfolio, but also bring in much needed post-war money. Intended as a stop gap, the Land Rover would cease production almost 68 years later, after a production run that had produced over two million vehicles. During that time it would transform how the military saw and used motor transport. From utilitarian General Service truck to cutting-edge weapon's platform the Land Rover would prove its
