EBOOK: Management Accounting, 6e

Value creation is no longer achieved through a single company alone, or through a network of local suppliers, but rather through wide ranging, even global supply chains. This reduces the transparency of the benefits and risks of the various supply chain setups and activities used for improving the performance of the supply chain. Such supply chain initiatives usually result in an investment by all supply chain partners involved, including the respective Chief Financial Officer (CFO). The supply chain partners therefore need a tool to show what improvements they can provide in logistics ; generally the reduction of inventory and reduction of lead time ; in terms of those financial variables that describe the value added to the company. The connection between supply chain management and financial management is currently very important. The integration of the two management levels is extremely important for the success of a supply chain initiative. Showing the possible benefits and risks for all concerned is a pre-requisite for assessing the economic value of the initiative and perceiving the win-win situation. This book and the "Supply Chain Value Contribution (SCVC)" method described therein provide: - An approach to showing the cause and effect of supply chain initiatives on supply chain performance and working capital utilization, on the basis of the well-established Supply Chain Operations Reference (SCOR)-model. - A clear and traceable approach on how to measure and sell the value created by the resulting operational supply chain performance improvements. The application of the SCVC method is described in two use cases. Due to the comprehensive but pragmatic presentation of the content, this book will be of value to both practitioners and academics alike.

Managerial Accounting for Managers, 4th edition by Noreen/Brewer/Garrison is based on the market-leading managerial accounting solution, Managerial Accounting, by Garrison, Noreen and Brewer. The Noreen solution presents integrated and proven solutions designed to help attain course goals of student readiness, comprehension of content, and application of key concepts in the managerial accounting course, while addressing the needs of instructors who do

not wish to teach the financial accounting-oriented content that is included in the Garrison solution (no debits/credits). Of the three programs in the Garrison franchise (the Brewer solution, the Garrison solution, and the Noreen solution), the Noreen solution is the most pure management accounting content. The other two programs contain greater coverage of financial accounting topics. Managerial Accounting for Managers 4e is geared towards professors who love Garrison's market-leading managerial accounting content but prefer to approach their course by eliminating the debits and credits coverage. The Noreen solution includes the managerial accounting topics such as Relevant Costs for Decision Making, Capital Budgeting Decisions, and Segment Reporting and Decentralization, however, the job-order costing chapter has been extensively rewritten to remove all journal entries. Furthermore, the chapters dealing with process costing, the statement of cash flows, and financial statement analysis have been dropped to enable professors to focus their attention on the bedrocks of managerial accounting—planning, control, and decision making. McGraw-Hill's Connect Accounting offers a complete digital solution combines all the great features of Connect Accounting including McGraw-Hill's SmartBook, powered by LearnSmart, which is designed to help students learn faster and more efficiently, and retain more knowledge for greater success. In addition, Interactive Presentations deliver learning objectives in an interactive environment, giving students access to course-critical content anytime, anywhere. These questions feature animated, narrated Help and Show Me tutorials (when enabled), as well as automatic feedback and grading for both students and professors.

Data Analytics and Decision-Making The text provides numerous discussions on how decision-makers are increasingly relying on data analytics to make decisions using accounting information. Accounting software systems collect vast amounts of data about a company's economic events as well as its suppliers and customers. Business decision-makers take advantage of this wealth of data by using data analytics to gain insights and therefore make more informed business decisions. Data analytics involves analyzing data, often employing both software and statistics, to draw inferences. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies"--
