Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

In this companion volume to his critically acclaimed first book, *The Tao of Muhammad Ali*, Davis Miller turns his attention to a second iconic figure of the twentieth century--and another of Miller's own seminal influences: film star and martial arts legend Bruce Lee. Just weeks after completing *Enter the Dragon*, his first vehicle for a worldwide audience, Bruce Lee--the self-proclaimed world's fittest man--died mysteriously at the age of thirty-two. The film has since grossed over \$500 million, making it one of the most profitable in the history of cinema, and Lee has acquired almost mythic status. Lee was a flawed, complex, yet singular talent. He revolutionized the martial arts and forever changed action moviemaking. But what has his legacy truly meant to the fans he left behind? To author Davis Miller, Lee was a profound mentor and a transformative inspiration. As a troubled young man in rural North Carolina, Miller was on a road to nowhere when he first saw *Enter the Dragon*, an encounter that would lead him on a physical, emotional, and spiritual journey and would change his life. As in *The Tao of Muhammad Ali*, Miller brilliantly combines biography--the fullest, most unflinching and revelatory to date--with his own coming-of-age story. The result is a unique and compelling book. From the Hardcover edition.

In the first edition of *Genetics and Molecular Biology*, renowned researcher and award-winning teacher Robert Schleif produced a unique and stimulating text that was a notable departure from the standard compendia of facts and observations. Schleif's strategy was to present the underlying fundamental concepts of molecular biology with clear explanations and critical analysis of well-chosen experiments. The result was a concise and practical approach that offered students a real understanding of the subject. This second edition retains that valuable approach--with material thoroughly updated to include an integrated treatment of prokaryotic and eukaryotic molecular biology. *Genetics and Molecular Biology* is copiously illustrated with two-color line art. Each chapter includes an extensive list of important references to the primary literature, as well as many innovative and thought-provoking problems on material covered in the text or on related topics. These help focus the student's attention on a variety of critical issues. Solutions are provided for half of the problems. Praise for the first edition: "Schleif's *Genetics and Molecular Biology*... is a remarkable achievement. It is an advanced text, derived from material taught largely to postgraduates, and will probably be thought best suited to budding professionals in molecular genetics. In some ways this would be a pity, because there is also gold here for the rest of us... The lessons here in dealing with the information explosion in biology are that an ounce of rationale is worth a pound of facts and that, for educational value, there is nothing to beat an author writing about stuff he knows from

theinside."--Nature. "Schleif presents a quantitative, chemically rigorous approach to analyzing problems in molecular biology. The text is unique and clearly superior to any currently available."--R.L. Bernstein, San Francisco State University. "The greatest strength is the author's ability to challenge the student to become involved and get below the surface."--Clifford Brunk, UCLA

Used widely in non-majors biology classes, *The Tangled Bank* is the first textbook about evolution intended for the general reader. Zimmer, an award-winning science writer, takes readers on a fascinating journey into the latest discoveries about evolution. In the Canadian Arctic, paleontologists unearth fossils documenting the move of our ancestors from sea to land. In the outback of Australia, a zoologist tracks some of the world's deadliest snakes to decipher the 100-million-year evolution of venom molecules. In Africa, geneticists are gathering DNA to probe the origin of our species. In clear, non-technical language, Zimmer explains the central concepts essential for understanding new advances in evolution, including natural selection, genetic drift, and sexual selection. He demonstrates how vital evolution is to all branches of modern biology—from the fight against deadly antibiotic-resistant bacteria to the analysis of the human genome.

Collected here for the first time are the best of Davis Miller's essays and memoirs. The volume contains his celebrated trilogy of award-winning Muhammad Ali pieces, including the classic 'My Dinner with Ali', together with a provocative new essay called 'The Yin and the Yang of Muhammad Ali'. There are also two pieces about Miller's unusual relationship with another boxer, 'Sugar' Ray Leonard, and he continues to explore the Bruce Lee phenomenon - as he did in his acclaimed bestseller *The Tao of Bruce Lee*. *The Zen of Muhammad Ali* tells us about fighting, living, friendship and love. The pieces are arranged - each with an illuminating new note - to form a unique and haunting book.

The most respected and accomplished authorship team in high school biology, Ken Miller and Joe Levine are real scientists and educators who have dedicated their lives to scientific literacy. Their experience, knowledge, and insight guided them in creating this breakthrough biology program -- one that continues to set the standard for clear, accessible writing. Brand-new content includes the latest scholarship on high-interest topics like stem cells, genetically modified foods, and antibiotics in animals.

Evolution is the central unifying theme of biology. Yet today, more than a century and a half after Charles Darwin proposed the idea of evolution through natural selection, the topic is often relegated to a handful of chapters in textbooks and a few class sessions in introductory biology courses, if covered at all. In recent years, a movement has been gaining momentum that is aimed at radically changing this situation. On October 25-26, 2011, the Board on Life Sciences of the National Research Council and the National Academy of Sciences held a national convocation in Washington, DC, to explore the many issues associated with teaching evolution

across the curriculum. Thinking Evolutionarily: Evolution Education Across the Life Sciences: Summary of a Convocation summarizes the goals, presentations, and discussions of the convocation. The goals were to articulate issues, showcase resources that are currently available or under development, and begin to develop a strategic plan for engaging all of the sectors represented at the convocation in future work to make evolution a central focus of all courses in the life sciences, and especially into introductory biology courses at the college and high school levels, though participants also discussed learning in earlier grades and life-long learning. Thinking Evolutionarily: Evolution Education Across the Life Sciences: Summary of a Convocation covers the broader issues associated with learning about the nature, processes, and limits of science, since understanding evolutionary science requires a more general appreciation of how science works. This report explains the major themes that recurred throughout the convocation, including the structure and content of curricula, the processes of teaching and learning about evolution, the tensions that can arise in the classroom, and the target audiences for evolution education.

The SOLARO Study Guide is designed to help students achieve success in school. It is a complete guide to be used by students throughout the school year for reviewing and understanding course content, and for preparing for assessments. The content in Texas High School Biology is specifically aligned to the Texas state standards for those who intend to have students complete biology by the end of high school. Each Class Focus includes the following sections: Structure and Function of Living Things; Genetics; Evolution and Classification; Biological Macromolecules and Metabolism; Biological Systems; and Ecosystems. To create this book, teachers, curriculum specialists, and assessment experts have worked closely to
