BOOK DESCRIPTION This is a book about leadership, which goes behind the

incessant news stories for unique, never before published facts and insights from a classic success story and tragedy. The book is not the typical trip down 'memory lane', the template of many books about a corporation. Nor is it like the dozens of books today that focus on the airline industry. Instead, there are profound and valuable lessons in this book for any leader, whatever the future brings for Delta. While giving poignant examples from many companies, Delta Air Lines is the book's poster child of a Board of Directors' and a leader's dramatic effects on tens of thousands of people. It gives the reader the no holds barred, inside story of Delta's success, decline and path to bankruptcy...the lessons learned...and what it needs to do to take off again. Fresh answers are given to the often-asked question, "What happened to Delta?" It is based on extensive research, including behind-the-scenes information from 59 members of the "Delta family", the author's in-depth personal knowledge as a member of that family, and his broad experience as a business executive and management consultant. The book examines the leadership decisions by each of Delta's 7 CEO's and its Board of Directors. It then highlights the decisions that built a highly profitable company for decades and those that have brought it to bankruptcy?and draws universal leadership lessons from them. It is also about a remarkable group of people. As the book shows, Delta employees and retirees have been shining examples of commitment to its heritage - Service and Hospitality From The Heart - even when constrained by ineffective leaders. Part of the tragedy is the price they are now paying and will be

paying for that ineffective leadership. The book is co-dedicated to the thousands of Delta employees and retirees who love what Delta once was and hope the current leaders have what it takes to restore it. This engaging, highly readable book gives the reader a fascinating inside look at a major U.S. corporation from both a business and a human perspective.

A market beating method for finding success in trading stocks Value is a concept that frequently eludes investors -- especially when it comes to stocks. In many cases, successfully identifying value can make the difference between picking a winner and getting burned. The Value Connection offers a systematic and doable method investors can use to take advantage of value in the stock market. Based on author Marc Gerstein's "Value Connection" method, this book will show investors how to find potentially attractive value connections, analyze specific situations to see if the value connection is sound, buy the best value connected opportunities, and sell stocks for which the value connection has weakened. The proven four-step method outlined -- which allows investors to understand the relationship between a company and its stock -- will help any investor screen the stock market for the best values out there. Real world examples make understanding this revolutionary investing method easy. Marc H. Gerstein (New York, NY) is the Director of Investment Research at Multex. Prior to that, he was in the research and editorial department at Value Line. Over the course of two decades he analyzed stocks across a wide variety of industries and sectors, including

household products, specialty retail, restaurants, mining, energy, hotel/gaming, homebuilding, airlines, railroads, and media. Gerstein appears periodically on CNNfn, Bloomberg TV, and is often quoted in USA Today, CBS MarketWatch, The Wall Street Journal, The New York Daily News, and Money Online. He is also the author of *Screening the Market* (0-471-21559-7).

The Routledge Language Family series is aimed at undergraduates and postgraduates of linguistics and language, and those with an interest in historical linguistics, linguistic anthropology and language development. According to a widely accepted hypothesis, the Khoesan languages represent the smallest of the four language phyla in Africa, geographically distributed mainly in Botswana and Namibia. Today, only 30 or so Khoesan languages may still exist, with about 300,000 native speakers. In other words, most Khoesan languages were already extinct before a sound scholarly interest in them could begin to develop. Drawing together a distinguished group of international experts, with much of the material taken from data collected by the authors' own field work, this volume presents descriptive, typological, historical-comparative and sociolinguistic material on Khoesan. The Khoesan Languages contains eight sections: an introduction, an overview of genetic relationships, a typological survey and profile of Khoesan, four chapters covering core linguistic areas of Khoesan phonetics and phonology, tonology, morphology and syntax, and a final chapter tackling major issues in Khoesan sociolinguistics, as well as discussions of language contact. Comprehensive

and scholarly, yet also lucid in its coverage of a broad range of languages, dialects and sub-groups, this unprecedented and original work represents the current state of Khoesan linguistics.

Agriculture to Zoology: Information Literacy in the Life Sciences sets the stage for purposefully integrating information literacy activities within the subject-specific content of the life sciences. The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decisions were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design

has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and providing a reference entry for each component.

Irby laughs her way through tragicomic mishaps, neuroses, and taboos as she struggles through adulthood: chin hairs, depression, bad sex, failed relationships, masturbation, taco feasts, inflammatory bowel disease and more. Updated with her favorite Instagramable, couch-friendly recipes, this much-beloved romp is treat for anyone in dire need of Irby's infamous, scathing wit and poignant candor.

Product sales, especially for new products, are influenced by many factors. These factors are both internal and external to the selling organization, and are both controllable and uncontrollable. Due to the enormous complexity of such factors, it is not surprising that product failure rates are relatively high. Indeed, new product failure rates have variously been reported as between 40 and 90

percent. Despite this multitude of factors, marketing researchers have not been deterred from developing and designing techniques to predict or explain the levels of new product sales over time. The proliferation of the internet, the necessity of developing a road map to plan the launch and exit times of various generations of a product, and the shortening of product life cycles are challenging firms to investigate market penetration, or innovation diffusion, models. These models not only provide information on new product sales over time but also provide insight on the speed with which a new product is being accepted by various buying groups, such as those identified as innovators, early adopters, early majority, late majority, and laggards. *New Product Diffusion Models* aims to distill, synthesize, and integrate the best thinking that is currently available on the theory and practice of new product diffusion models. This state-of-the-art assessment includes contributions by individuals who have been at the forefront of developing and applying these models in industry. The book's twelve chapters are written by a combined total of thirty-two experts who together represent twenty-five different universities and other organizations in Australia, Europe, Hong Kong, Israel, and the United States. The book will be useful for researchers and students in marketing and technological forecasting, as well as those in other allied disciplines who study relevant aspects of innovation diffusion. Practitioners

in high-tech and consumer durable industries should also gain new insights from New Product Diffusion Models. The book is divided into five parts: I. Overview; II. Strategic, Global, and Digital Environments for Diffusion Analysis; III. Diffusion Models; IV. Estimation and V. Applications and Software. The final section includes a PC-based software program developed by Gary L. Lilien and Arvind Rangaswamy (1998) to implement the Bass diffusion model. A case on high-definition television is included to illustrate the various features of the software. A free, 15-day trial access period for the updated software can be downloaded from <http://www.mktgeng.com/diffusionbook>. Among the book's many highlights are chapters addressing the implications posed by the internet, globalization, and production policies upon diffusion of new products and technologies in the population.

Taking an in-depth look at the mobile communications ecosystem, this book covers the two key components, i.e., Network and End-User Devices, in detail. Within the network, the sub components of radio access network, transmission network, core networks, services and OSS are discussed; component level discussion also features antenna diversity and interference cancellation techniques for smart wireless devices. The role of various standard development organizations and industry forums is highlighted throughout. The ecosystem is

strengthened with the addition of the Technology Management (TM) component dealing mostly with the non-technical aspects of the underlying mobile communications industry. Various aspects of TM including technology development, innovation management, knowledge management and more are also presented. Focuses on OFDM-based radio technologies such as LTE & WiMAX as well as MBWA (Mobile Broadband Wireless Access) Provides a vital addition to the momentum of EVDO and its migration towards LTE Emphasis on radio, core, operation, architectural and performance aspects of two next generation technologies - EPS and WiMAX Includes discussion of backhaul technologies and alternatives as well as issues faced by operators switching to 3G and Next Generation Mobile Networks Cutting-edge research on emerging Gigabit Ethernet Microwave Radios and Carrier Ethernet transport technologies Next Generation Mobile Communications Ecosystem serves as a practical reference for telecom associated academia and industry to understanding mobile communications in a holistic manner, as well as assisting in preparing graduate students and fresh graduates for the marketplace by providing them with information not only on state-of-the-art technologies and standards but also on TM. By effectively focusing on the key domains of TM this book will further assist companies with improving their competitiveness in the long run. Importantly, it will

provide students, engineers, researchers, technology managers and executives with extensive details on various emerging mobile wireless standards and technologies.

The report will start analyzing the evolution of the market of mobile phones and Nokia's role in it. Then we will move on to the company's strategy in former times and its success factors. Next point will be the external analysis (SBU, breakthrough resources and capabilities, competitors and the industry). Afterwards we will analyze the current strategic plan of Nokia and a predictable forecast for Nokia's evolution according to future events such as the launch of the new iPhone. Finally this report will contain an evaluation on Nokia's decision: to what extent we believe, as a consulting professional group, it is positive or negative for Nokia to return to the market.

This Circuits Manual examines operating principles and practical applications of modern medium-speed and 'fast' CMOS digital ICs. 470 carefully selected circuits,

diagrams, graphs and tables are supported by the informative 'how to' text and by detailed descriptions of more than 120 modern CMOS ICs and their practical applications. Although ideal for practical design engineers and technicians, this book will doubtless also be of great interest to hobbyists and students of electronics. Using clear and comprehensive language, each chapter begins with an explanation of the basic principles of the subject followed by the presentation of circuits and useful data. The first chapter describes and explains digital IC basics, CMOS and TTL principles, the various CMOS sub-families and CMOS basic-usage rules. Chapter 2 gives a practical introduction to CMOS basics via the 4007UB IC, which can be used in both digital and linear applications. Chapter 3 deals with modern logic circuitry, and Chapter 4 with CMOS bilateral switches and data selectors. The next six chapters progress through waveform generator circuitry, clocked flip-flop and counter circuits, ICs, special counter/dividers, data latches, registers, comparators, and code converters. Chapter 11 focuses on specialised types of IC such as multiplexers and decoders while the final chapter presents a miscellaneous collection of useful CMOS circuits.

This volume reports the findings of a study of the productivity impact of varietal improvement research conducted at a number of international centers affiliated with the Consultative Group on International Agricultural Research. Such centers have been at the forefront of the "Green Revolution" that resulted in the breeding of new crop varieties of the world's staple food crops. Econometric models are used to evaluate the

investment in these cases of agricultural research and to analyze impact in selected countries.

The Swiss National Forest Inventory (NFI) is a forest survey on national level which started in 1982 and has already reached its 5th survey cycle (NFI5). It can be characterized as a multisource and multipurpose inventory where information is mainly collected from terrestrial field surveys using permanent sample plots. In addition, data from aerial photography, GIS and forest service questionnaires are also included. The NFI's main objective is to provide statistically reliable and sound figures to stakeholders such as politicians, researchers, ecologists, forest service, timber industry, national and international organizations as well as to international projects such as the Forest Resources Assessment of the United Nations. For Switzerland, NFI results are typically reported on national and regional level. State of the art methods are applied in all fields of data collection which have been proven to be of international interest and have even served as a basis for other European NFIs. The presented methods are applicable to any sample based forest inventory around the globe. In 2001 the Swiss NFI published its methods for the first time. Since then, many methodological changes and improvements have been introduced. This book describes the complete set of methods and revisions since NFI2. It covers various topics ranging from inventory design and statistics to remote sensing, field survey methods and modelling. It also describes data quality concepts and the software framework used for data storage, statistical analysis

and result presentation.

Linux consistently turns up high in the list of popular Internet servers, whether it's for the Web, anonymous FTP, or general services like DNS and routing mail. But security is uppermost on the mind of anyone providing such a service. Any server

experiences casual probe attempts dozens of times a day, and serious break-in attempts with some frequency as well. As the cost of broadband and other high-speed Internet connectivity has gone down, and its availability has increased, more Linux users are providing or considering providing Internet services such as HTTP, Anonymous FTP, etc., to the world at large. At the same time, some important, powerful, and popular Open Source tools have emerged and rapidly matured--some of which rival expensive commercial equivalents--making Linux a particularly appropriate platform for providing secure Internet services. Building Secure Servers with Linux will help you master the principles of reliable system and network security by combining practical advice with a firm knowledge of the technical tools needed to ensure security. The book focuses on the most common use of Linux--as a hub offering services to an organization or the larger Internet--and shows readers how to harden their hosts against attacks. Author Mick Bauer, a security consultant, network architect, and lead author of the popular Paranoid Penguin column in Linux Journal, carefully outlines the security risks, defines precautions that can minimize those risks, and offers recipes for robust security. The book does not cover firewalls, but covers the more common situation where an organization protects its hub using other systems as firewalls, often proprietary firewalls. The book includes: Precise directions for securing

common services, including the Web, mail, DNS, and file transfer. Ancillary tasks, such as hardening Linux, using SSH and certificates for tunneling, and using iptables for firewalling. Basic installation of intrusion detection tools. Writing for Linux users with little security expertise, the author explains security concepts and techniques in clear language, beginning with the fundamentals. Building Secure Servers with Linux provides a unique balance of "big picture" principles that transcend specific software packages and version numbers, and very clear procedures on securing some of those software packages. An all-inclusive resource for Linux users who wish to harden their systems, the book covers general security as well as key services such as DNS, the Apache Web server, mail, file transfer, and secure shell. With this book in hand, you'll have everything you need to ensure robust security of your Linux system.

A New York Review Books Original Hav is like no place on earth. Rumored to be the site of Troy, captured during the crusades and recaptured by Saladin, visited by Tolstoy, Hitler, Grace Kelly, and Princess Diana, this Mediterranean city-state is home to several architectural marvels and an annual rooftop race that is a feat of athleticism and insanity. As Jan Morris guides us through the corridors and quarters of Hav, we hear the mingling of Italian, Russian, and Arabic in its markets, delight in its famous snow raspberries, and meet the denizens of its

casinos and cafés. When Morris published *Last Letters from Hav* in 1985, it was short-listed for the Booker Prize. Here it is joined by *Hav of the Myrmidons*, a sequel that brings the story up-to-date. Twenty-first-century Hav is nearly unrecognizable. Sanitized and monetized, it is ruled by a group of fanatics who have rewritten its history to reflect their own blinkered view of the past. Morris's only novel is dazzlingly sui-generis, part erudite travel memoir, part speculative fiction, part cautionary political tale. It transports the reader to an extraordinary place that never was, but could well be.
