Exactly 450 years after the solemn closure of the Council of Trent on 4 December 1563, scholars from diverse regional, disciplinary and confessional backgrounds convened in Leuven to reflect upon the impact of this Council, not only in Europe but also beyond. Their conclusions are to be found in these three impressive volumes. Bridging different generations of scholarship, the authors reassess in a first volume Tridentine views on the Bible, theology and liturgy, as well as their reception by Protestants, deconstructing many myths surviving in scholarship and society alike. They also deal with the mechanisms 'Rome' developed to hold a grip on the Council's implementation. The second volume analyzes the changes in local ecclesiastical life, initiated by bishops, orders and congregations, and the political strife and confessionalisation accompanying this reform process. The third and final volume examines the afterlife of Trent in arts and music, as well as in the global impact of Trent through missions.

THE STORY: TAKING SIDES takes place in the American Zone of occupied Berlin, in 1946. It is here the American portion of the De-Nazification Tribunal has convened to take over the questioning of Wilhelm Furtwängler, one of the outstanding conductors of his time. In this updated and revised edition of *Just Passing Through: A German American Family Saga*, first published in 2011, the author tells the story of several generations of his unique but dysfunctional family spanning over a hundred years including the two world wars. Peter Zell was eight years old when World War II ended and in a prologue entitled *A German - American Childhood* recounts his boyhood experiences that included the apocalyptic firebombing of his hometown of Stuttgart by the western Allies, the postwar occupation of Germany, and his family's emigration to America. The book centers on the author's mother, whom her children called Mutti, and her ordeal during the Nazi era for having been married to a Jew, the son of prosperous Frankfurt business owners, with whom she had two children. With anti-Semitism on the rise in Germany, her husband decided to emigrate to America but Mutti chose to remain behind to take care of her ailing father. The couple had an amicable divorce and while her ex-husband took their son with him, their daughter remained with Mutti in Germany. Under the Nuremberg Laws of 1935, mother and daughter now found themselves classified as non-Aryans which meant that Mutti could not remarry while their teenage daughter, being half Jewish, was put in dire jeopardy of her life. At this point Mutti's older brother, himself a dedicated National Socialist, proposed an unconventional solution that ensured her survival. Following his advice, she had more children, fathered by so-called Aryans, who were eventually all brought to America. The book follows the lives of the five siblings, all half-brothers and half-sisters, and their difficult relationships with each other as each seeks to achieve his or her version of the American Dream.

The first complete resource devoted to the SS-Aufseherinnen -- the female guards of the German concentration camps during World War II. Professor Brown's timely work fills a void in the terrible annals of Nazism; at last, the women guards and their crimes are subject to public scrutiny.

This book is written for students who know that they are not doing well in Additional Mathematics and for students who do well but want to do even better. The writer has gone through many Additional Mathematics syllabuses and examination papers. He has taught for many years as a teacher and tutor. He understands the difficulties many students face. That is why the book is a very comprehensive summary of all the topics the student needs to learn and covers almost every area where questions will most likely be asked. Use it as a reference book to supplement textbooks and teachers' teachings, or as a guide for quick revision. Mastering mathematics taught in secondary schools does not require a genius. The most important secret in learning mathematics is in understanding as much as possible what is being taught. Your reasoning mind must be convinced. You must refuse to be force-fed. Concepts, definitions, theorems, procedures and symbols must be understood and not accepted blindly only to be regurgitated in homework and examinations. They must not be scattered like fallen leaves on the soil of a sterile mind. They must be connected to each other like luscious fruits in a bunch of grapes. That is how the materials in this book are organized. Many topics and methods which are not found elsewhere are explained in detail but a lot of what can already be found in every textbook is excluded. Standard forms of formulae are grouped together for easy reference. Study each chapter thoroughly before going to the next, omitting chapters which are not included in your syllabus. This book is a great help to students but it can never replace their relentless efforts. If any student refuses to exert his mind then his failure is expected but it is entirely self-inflicted. Food must

be ingested, digested and then absorbed, assimilated and metabolized. Mathematics topics, once learned (ingested) and understood (digested), must be memorized (absorbed), associated and integrated with what one has learned before (assimilated), and put to use by constant practice (metabolized). Procedures, which have already been justified to an inquiring mind, must now become automatic in execution. Mathematics is not a haphazard collection of formulas and theorems put together for the purpose of setting examination questions. It is a supreme achievement of human creativity and ingenuity. It is interesting, challenging and useful. It repays generously every one of its diligent students. Passing examination is the least of its rewards.

Search structures support the fundamental data storage primitives on key-value pairs: insert a pair, delete by key, search by key, and update the value associated with a key. Concurrent search structures are parallel algorithms to speed access to search structures on multicore and distributed servers. These sophisticated algorithms perform fine-grained synchronization between threads, making them notoriously difficult to design correctly. Indeed, bugs have been found both in actual implementations and in the designs proposed by experts in peer-reviewed publications. The rapid development and deployment of these concurrent algorithms has resulted in a rift between the algorithms that can be verified by the state-of-the-art techniques and those being developed and used today. The goal of this book is to show how to bridge this gap in order to bring the certified safety of formal verification to high-performance concurrent search structures. Similar techniques and frameworks can be applied to concurrent graph and network algorithms beyond search structures.
