¿ For students taking the Materials Science course . This book is also suitable for professionals seeking a guided inquiry approach to materials science. ¿ This unique book is designed to serve as an active learning tool that uses carefully selected information and guided inquiry questions. Guided inquiry helps readers reach true understanding of concepts as they develop greater ownership over the material presented. First, background information or data is presented. Then, concept invention questions lead the students to construct their own understanding of the fundamental concepts represented. Finally, application questions provide the reader with practice in solving problems using the concepts that they have derived from their own valid conclusions.¿

Longevity Project. This landmark study--which Dr. Andrew Weil calls "a remarkable achievement with surprising conclusions"--depends on the advice we have been told about how to live to a healthy old age. We have been told that the key to longevity involves obsessing over what we eat, how much we stress, and how fast we run. Based on the most extensive study of longevity ever conducted, *The Longevity Project* exposes what really impacts our lifespan--including friends, family, personality, and work. Gathering new information and using modern statistics to study participants across eight decades, Dr. Howard Friedman and Dr. Leslie Martin bust myths about achieving health and long life. For example, people do not die from working long hours at a challenging job--many who worked the hardest lived the longest. Getting and staying married is not the magic ticket to long life, especially if you're a woman. And it's not the happy-go-lucky ones who thrive--it's the prudent and persistent who flourish through the years. With questionnaires that help you determine where you are heading on the longevity spectrum and advice about how to stay healthy, this book changes the conversation about living a long, healthy life.

This authoritative handbook is the reference of choice for researchers and students of personality. Leading authorities describe the most important theoretical approaches in personality and review the state of the science in five broad content areas: biological bases; development; self and social processes; cognitive and motivational processes; and emotion, adjustment, and health. Within each area, chapters present innovative ideas, findings, research designs, and measurement approaches. Areas of integration and consensus are discussed, as are key questions and controversies still facing the field.

Personality Theories: Critical Perspectives is the groundbreaking, final text written by Albert Ellis, long considered the founder of cognitive behavioral therapies. The book provides students with supporting and contradictory evidence for the development of personality theories through time. Without condemning the founding theorists who came before him, Ellis builds on more than a century of psychological research to re-examine the theories of Freud, Jung, and Adler while taking an equally critical look at modern, research-based theories, including his own.

Karl Marx, Emile Durkheim, and Max Weber are indispensable for understanding the sociological enterprise. They are among the chief founders of the discipline and among the foremost theorists of modernity, and their work can stimulate readers to reflect on their own identities and worldviews.

Classical Social Theory and Modern Society introduces students to these three thinkers and shows their continued relevance today. The first chapter sets the stage by situating the work of Marx, Durkheim, and Weber in the context of three modernizing revolutions: the Enlightenment, the French Revolution of 1789, and the industrial revolution. Three overview chapters follow that summarize the key ideas of each thinker, focusing on their contributions to the development of sociology and their conceptions of modern society. The last portion of the book explores the thinking of Marx, Durkheim, and Weber on four themes—the

pathologies of modern society, the predicament of the modern individual, the state and democracy, and socialism versus capitalism. These thematic chapters place Marx, Durkheim, and Weber in dialogue with one another, offering students the opportunity to wrestle with conflicting ideas on issues that are still significant today. Classical sociology is essential to the teaching of sociology and also an invaluable tool in the education of citizens.

Many racial and ethnic groups in the United States, including blacks, Hispanics, Asians, American Indians, and others, have historically faced severe discriminationâ€"pervasive and open denial of civil, social, political, educational, and economic opportunities. Today, large differences among racial and ethnic groups continue to exist in employment, income and wealth, housing, education, criminal justice, health, and other areas. While many factors may contribute to such differences, their size and extent suggest that various forms of discriminatory treatment persist in U.S. society and serve to undercut the achievement of equal opportunity.

Measuring Racial Discrimination considers the definition of race and racial discrimination, reviews the existing techniques used to measure racial discrimination, and identifies new tools and areas for future research. The book conducts a thorough evaluation of current methodologies for a wide range of circumstances in which racial discrimination may occur, and makes recommendations on how to better assess the presence and effects of discrimination.

An engaging introduction to the science of vision that offers a coherent account of vision based on general information processing principles In this accessible and engaging introduction to modern vision science, James Stone uses visual illusions to explore how the brain sees the world. Understanding vision, Stone argues, is not simply a question of knowing which neurons respond to particular visual features, but also requires a computational theory of vision. Stone draws together results from David Marr's computational framework, Barlow's efficient coding hypothesis, Bayesian inference, Shannon's information theory, and signal processing to construct a coherent account of vision that explains not only how the brain is fooled by particular visual illusions, but also why any biological or computer vision system should also be fooled by these illusions. This short text includes chapters on the eye and its evolution, how and why visual neurons from different species encode the retinal image in the same way, how information theory explains color aftereffects, how different visual cues

provide depth information, how the imperfect visual information received by the eye and brain can be rescued by Bayesian inference, how different brain regions process visual information, and the bizarre perceptual consequences that result from damage to these brain regions. The tutorial style emphasizes key conceptual insights, rather than mathematical details, making the book accessible to the nonscientist and suitable for undergraduate or postgraduate study. Today psychometrics plays an increasingly important role in all our lives as testing and assessment occurs from preschool until retirement. This book introduces the reader to the subject in all its aspects, ranging from its early history, school examinations, how to construct your own test, controversies about IQ and recent developments in testing on the internet. In Part one of Modern Psychometrics, Rust and Golombok outline the history of the field and discuss central theoretical issues such as IQ, personality and integrity testing and the impact of computer technology and the internet. In Part two a practical step-by-step guide to the development of a psychometric test is provided. This will enable anyone wishing to develop their own test to plan, design, construct and validate it to a professional standard. This third edition has been extensively updated and expanded to take into account recent developments in the field, making it the ideal companion for those studying for the British Psychological Society's Certificates of Competence in Testing. Modern Psychometrics combines an up to date scientific approach to the subject with a full consideration of the political and ethical issues

Why? is the simple, impulsive question we ask when confronted by horrible acts of hatred and violence. Why do students shoot fellow students or employees their coworkers? Why do mothers drown their children or husbands stalk and kill their wives? Love to Hate challenges us to turn this question upon ourselves at a deeper level. Why, as a culture, are we so fascinated by these acts? Why do we bestow celebrity on the perpetrators, while allowing the victims to fade into a second death of obscurity? Are we, as Pope John Paul II famously accused, "a culture of death"? And if so, how can we break free of this unacknowledged aspect of the cycle of violence? Unlike those who point solely to media imagery, splintered families, or lax gun control laws in search of the roots of America's endemic violence, Jody M. Roy suggests that we all must be held responsible. She argues that we reveal our love affair with hatred and violence in the ways we think and speak in our daily lives and in our popular culture. The very words we use function as building blocks of callousness and contempt, betraying our immersion in subtexts of violence and hatred. These subtexts are further revealed in our complex attitudes toward street gangs, school shooters, serial killers, and hate groups and the paroxysms of violence they unleash. As spectators, driven by our

impulse to watch, we become an integral part of the equation of violence. In the book's final section, "Freeing Ourselves of Our Obsession with Hatred and Violence," Roy offers practical steps we can take—as parents, consumers, and voters—to free ourselves from linguistic and cultural complicity and to help create in America a culture of life.

Religion in Personality Theory makes clear the link between theory and research and personality and religion. Presently, most personality texts have a limited discussion of religion and reference few theorists other than Freud and Maslow in relation to the subject. This book reviews the theory and the empirical literature on the writings of 14 theorists. Every chapter concludes with a summation of the current research on the theorist's proposals. Reviews: "Frederick Walborn has written an excellent text that explores the degree to which classical personality theorists were personally influenced by and focused upon religion in developing their personality theories. Each theorist is presented in sufficient detail so that their personal views of religion are seen to influence the theories they developed. In addition, the current status of the empirical evidence in the psychology of

The author has revised this popular experiential workbook by adding Carl Jung and Karen Horney to his cast of major personality theorists -- Freud, Adler, Erikson, Bandura, Allport, Maslow, and Rogers -- who provide the context within which students explore aspects of their private experience. Through exercises, projects, and group activities, students are given the means to relate abstract theories and concepts to their own personality development and experience. Many exercises deal with private aspects of students' lives and are designed to be completed individually out of the classroom and reviewed by the instructor. Other classroom exercises involve working with peers in small-groups.
