Focusing provides an effective way of listening to the innate wisdom of the body, while art therapy harnesses and activates creative intelligence. *Focusing-Oriented Art Therapy: Accessing the Body's Wisdom and Creative Intelligence* is a ground-breaking book integrating renowned psychologist Eugene Gendlin's Focusing with art therapy. This new, Focusing-based approach to art therapy helps clients to befriend their inner experience, access healing imagery from the body's felt sense to express in art, and carry forward implicit steps that lead toward change. Written for readers to be able to learn the application of this innovative approach, the book provides in-depth examples and descriptions of how to adapt Focusing-Oriented Art Therapy to a wide variety of clinical populations including individuals and groups with severe psychiatric illness, trauma, PTSD, anxiety, depression, and more, as well as applications to private practice, illness and wellness, spirituality, and self-care. Integrating theory, clinical practice, and numerous guided exercises, this accessible book will enhance clinical sensitivity and skill, while adding resources for bringing creativity into practice. It will be of interest to art therapists, Focusing therapists, psychologists, counselors and social workers, as well as trainers and students.

Organize your space in the best way to achieve therapeutic significance. "The good enough studio"-derived from D.W. Winnicott's notion of the good enough mother-serves as a safe space where clients, students, and artists find modes of expression and being that unveil their own authenticity and connection to the archaic creativity of humanity. As a global art therapist and educator, Nona Orbach facilitates this profound alchemy of self-transformation by attending to the nonverbal, intuitive choreography that each individual uses in order to create. In Orbach's groundbreaking therapeutic model, the consciously organized studio is a place of acceptance where actions, materials, and the space itself "speak" and guide discovery. In this book readers will learn how to: Organize an open-studio setting Create an environment of acceptance and choice that facilitates transformation Understand action-material relationships as emotional and pedagogical communication Discern and mirror each individual's creative blueprint The insights of The Good Enough Studio will cultivate the work of those interested in the phenomenology of materials: artists, educators, therapists, and parents, as well as the nonprofessional and curious reader. Through guidance and case studies, Orbach shows how the creator's poetic truth can lead to integration and well-being. Nona Orbach is a multidisciplinary artist, therapist, blogger, lecturer, and facilitator of workshops for art therapists in Israel and

around the world. Her artwork engages with archeological and historical contexts and is compiled under the title Tel-Nona. As an excavator in the Tel (mound) and preserver of the artifacts in a blog/virtual library, Nona metaphorically revives the great Alexandrian library that burnt down with its million scrolls in the first century BCE. Tel-Nona preserves its spirit of sharing knowledge in an international humanistic project. She also leads a social movement to change the Israeli education system through the learning and understanding afforded by the studio and the language of materials. Her online learning community includes over 7,000 participants from the fields of education and therapy. She has created an English blog and a study group with the title of this book to circulate her ideas internationally. Her previous book, *The Spirit of Matter*, co-authored with Lilach Gelkin, has been an immensely useful tool for therapists and educators for many years. Published in Israel in 1977, the PDF English version of the book is sold on her website.

The early years are the most critical period of learning for a child with autism. Therapeutic art-making can be a useful tool to tap into their imaginations and help them to express their thoughts and feelings. *Art as an Early Intervention Tool for Children with Autism* includes practical advice on helping a child move beyond scribbling, organizing the child's environment for maximum comfort and

relaxation, and providing physical and sensory support. This book is packed with tips and suggestions for how to provide art therapy for children with autism — covering topics such as the basic materials required, safety issues, how to set up a workspace, and ideas for managing difficult behavior. The author writes from a professional and personal perspective — Nicole Martin is a qualified art therapist specializing in working with children with autism, and she also has a brother with autism. Perfect for busy parents and as a practical reference for professionals such as psychologists, teachers, occupational therapists, sensory integration therapists and anyone working with a child on the autism spectrum.

The Child's Creation of a Pictorial World places child art within the broader context of children's creative intelligence and intrinsic motivation to invent a pictorial world. It examines the development of drawing and painting from several theoretical perspectives before examining empirical data on the artwork of children who are ordinary, talented, emotionally disturbed, and atypically developed due to mental disability or autism. The Child's Creation of a Pictorial World is intended for a broad readership of developmental psychologists, educational psychologists, clinical psychologists who use drawings for diagnostic or therapeutic purposes, anthropologists interested in art, art educators, and

early childhood educators. It can also serve as a textbook for undergraduate and graduate courses in child art offered in departments of psychology, art education, art history, and early childhood education. This well-organized, readable book provides the tools to develop rich, meaningful activities that integrate art into the educational experience for children ages 1 ½ through 8. It is based on up-to-date research in cognitive, creative and artistic development, multiple intelligences theory, and the Reggio Emilia experience. Special attention is given to integrating art with language arts, science, math, social studies, and music and movement using thematic teaching and the project approach. Drawing, painting, printmaking, fiber art, clay, collage, puppets, masks, blocks, constructions, papier maché, and computer art are all included. This creative book offers a framework for designing safe, open-ended art experiences that develop the child's ability to look at, talk about, and create art. First Published in 1995. Routledge is an imprint of Taylor & Francis, an informa company. Positive Art Therapy Theory and Practice outlines a clear, systematic approach for combining positive psychology with art therapy's capacity to mobilize client strengths; induce engagement, flow and positive emotions; transform perceptions; build healing relationships and empowering narratives; and illuminate life purpose and meaning. throughout are clinical illustrations, state-of-the-art research, discussion questions, and reflections on how therapists can apply this approach to their work with clients, and their personal and professional development. The book also includes a comprehensive list of more than 80 positive art therapy directives, a robust glossary, and lists of strengths and values. Written in an inviting and amusing style, this manual is both entertaining and practical—an invaluable tool for any practitioner looking to apply the most current theory and research on positive psychology and art therapy to their clinical practice.

Because scholars have traditionally examined the efforts of American suffragists only in relation to electoral politics, the history books have largely missed the real story of what these women achieved far outside the realm of voting reform. Though Stanton, Anthony, and Mott are the best known figures of the woman's suffrage movement, all were dead more than a decade before women actually achieved the vote. Women like Alice Paul, Louisine Havemeyer, and Mary Church Terrell carried on their work, putting their campaign experiences to work long after the 19th Amendment was ratified. This book tells the story of how these women made an indelible mark on American history in fields ranging from education to art, science, publishing, and social activism. This practical resource demonstrates how all clinicians can broaden and enhance their work with children by integrating drawing into therapy. The book enables therapists to address the multidimensional aspects of children's art without resorting to simplistic explanations. Approaching drawing as a

springboard for communication and change, Malchiodi offers a wealth of guidelines for understanding the intricate messages embedded in children's drawings and in the art-making process itself. Topics covered include how to assist children in making art, what questions to ask and when, and how to motivate children who are initially resistant to drawing. Assimilating extensive research and clinical experience, the book includes over 100 examples of children's work.

visual arts and theatre (drama) presents strategies for developing lesson plans to encourage using the arts as an all encompassing arena for including mathematics, science, social studies and the language arts within a creative arts curriculum. Assessment. Assessment procedures are presented and described to provide students and instructors with concrete ideas that will provide children opportunities to demonstrate their capabilities in a fair and accurate manner in an authentic setting that is integrated into the instructional process. Theory Into Practice: Implications for Teaching. These sections take a critical look at theory and presents ideas for linking theory to practice. Suggestions are provided for developing activities based on the developmental level of the children. This feature demystifies what can be abstract theoretical ideas and describes theory in terms of children's active learning modalities. Where Does a Teacher Get Ideas for Creative Arts? This feature presents ideas gleaned from practicing teachers about how they use children's interests in deciding on ideas for process oriented art lessons. Successful lessons from teachers are included throughout the chapters on music, dance and movement, visual arts and theatre. The child's idea of art collides head on with the typical formulas adults have passed down from one generation to another. Watchful and well meaning teachers who coax young children to draw real-life objects are not being helpful; indeed, their efforts may stifle the pride, the pleasure, the confidence so necessary to growth of a creative spirit. For almost forty years, DeeDee Halleck has been involved in a variety of projects that involve media making by non-professionals. Her goal has been to develop a critical sense of the potential and limitations of mediated communication through practical exercises that generate a sense of both individual and non-hierarchical group power over the various apparatus of media and electronic technology. Visions is a collection of essays, presentations, and lectures that she has written throughout this process. Halleck starts with a discussion of her own development as a teacher, producer, and an active participant in the struggle for media democracy. She gives the reader a historical first-person perspective on the community-based media movement and a sense of the determination and resolve that have enabled often fragile and much embattled organizations and individuals to survive in a climate dominated by global media corporations that are in direct opposition to their work. The author questions inherited wisdom about children's development in visual representation and explains different models of development in visual expression.

What function or purpose does art satisfy in today's society? Section one gives a general overview of the nature of art and its relationship to education. In section two are psychological issues discussed, including the nature of creativity and its associations with art. Section three gives issues in art and learning. The final section considers the notion of creating aesthetic significance as a fundamental human urge. Review in: *Cultural trends*.21(2012)2(Jun.175-177).

When we drew as children, we never worried about making mistakes—we took risks and trusted ourselves, and had fun in the process. But as we become adults, anxiety steps in: “Am I doing this right?” “What is expected of me?” “This is wrong!” And from drawing, we can extrapolate into the rest of our lives. The fear of making a mistake hinders us from being as creative as we could be. Deborah Putnoi’s interactive sketchbook helps us reconnect to that open, nonjudgmental state, which she calls the “drawing mind.” Her bold, lively

Children actually live in the mythological period of our ancestors. Just as our ancestors' growing process of awareness was reflected in mythological stories, rituals, fairy tales and primitive art, a child's process of awareness is reflected in his or her drawings. There are similarities between the products from various periods of art history and the drawings that children make at various ages. In 'Draw me a Picture' children's drawings ranging from their very first scribbles to drawings by adolescents are described and analyzed. And, when doing so, the author repeatedly makes links to the world of children's games. She also offers illustrative examples from her therapeutic practice. This book is a tool for play therapists, art therapists, sandplay therapists and teachers.

It is not uncommon for children's drawings to end up in the wastepaper basket. Yet these early artistic expressions indicate how children communicate with their environment. From the first scratches and scribbles to the detailed sketches of houses and people, the drawings and paintings of our young ones are significant manifestations of inner processes, containing important statements about their development and gradual incarnation into a physical body. Michaela Strauss's classic work is a pioneer study that can strengthen observation, understanding and love for the being of the child, both in the home and the kindergarten. First issued in 1978, it is republished here with revisions, improved reproductions, a larger format and more than 40 pages of colour illustrations. foundation upon which all later fundamental skills are built. She drives home the idea that encouraging children's artistic growth will have beneficial effects on all other aspects of their emotional and intellectual development. At the core of this practical guide is the understanding that art is an important tool in teaching young children crucial concepts related to self-expression, reading and writing. As opposed to more structured exercises, such as coloring on dittos and underlining pictures in workbooks, Striker stresses that scribbling and free drawing experiments are the most important art activities a child can engage in; they better prepare children to read independently as they grow. Young at Art provides descriptions for age-appropriate art activities, tips for carrying them out safely, and helps parents recognize what a child's art work should look like at each stage of development. With Young at Art, parents will develop realistic expectations of their children's work, learn how to speak to their children about their art, and facilitate skills well beyond their creativity that will benefit children.
