In the last decade, enormous progress has been made on the physiology of plant roots, including on a wide range of molecular aspects. Much of that progress has been captured in the chapters of this book. Breakthroughs have been made possible through integration of molecular and whole-plant aspects. The classical boundaries between physiology, biochemistry and molecular biology have vanished. There has been a strong focus on a limited number of model species, including *Arabidopsis thaliana*. That focus has allowed greater insight into the significance of specific genes for plant development and functioning. However, many species are very different from *A. thaliana*, in that they are mycorrhizal, develop a symbiosis with N<sub>2</sub>-fixing microsymbionts, or have other specialised root structures. Also, some have a much greater capacity to resist extreme environments, such as soil acidity, salinity, flooding or heavy-metal toxicities, due to specific adaptations. Research on species other than *A. thaliana* is therefore pivotal, to develop new knowledge in plant sciences in a comprehensive manner. This fundamental new knowledge can be the basis for important applications in, e.g., agriculture and plant conservation. Although significant progress has been made, much remains to be learnt. It is envisaged

This collection examines education in the light of a politics of becoming. It takes a non-hierarchical transdisciplinary approach, challenging the macropolitics of pre-established governmental and economic agendas for education. Drawing on the philosophy of Gilles Deleuze and Felix Guattari, the contributors consider questions such as how education might engage a politics of becoming, and how education and becoming function in a society of control. Since Deleuze and Guattari contend that a society is defined by its becomings, its transformations, this collection asks how education, itself a process in becoming, may contribute "collective creations" to a society in continual flux. The chapters bring theory and praxis together, deploying power, affect, cartography, space, relationality, assemblage and multiple literacies in order to experiment with music, art, language, teacher education, curriculum and policy studies. This collection is an innovative resource, creating an encounter with the macropolitics of education, and altering teaching, learning, evaluation and curriculum. This book was originally published as a special issue of *Discourse: Studies in the Cultural Politics of Education*.

The overwhelming majority of tea practitioners in contemporary Japan are women, but there has been little discussion on their historical role in tea culture (chanoyu). In *Cultivating Femininity*, Rebecca Corbett writes women back into this history and shows how tea practice for women was understood, articulated, and promoted in the Edo (1603–1868) and Meiji (1868–1912) periods. Viewing chanoyu from the lens of feminist and gender theory, she sheds new light on tea's undeniable influence on the formation of modern understandings of femininity in Japan. Corbett overturns the iemoto tea school's carefully constructed orthodox narrative by employing underused primary sources and closely examining existing tea histories. She incorporates Pierre Bourdieu's theories of social and cultural capital and Norbert Elias's "civilizing process" to explore the economic and social incentives for women taking part in chanoyu. Although the iemoto system sought to increase its control over every aspect of tea, including book production, eighteenth- and nineteenth-century popular texts aimed specifically at women evidence the spread of tea culture beyond parameters set by the schools. The expansion of chanoyu to new social groups cascaded from commoner men to elite then commoner women. Shifting the focus away from male tea masters

complicates the history of tea in Japan and shows how women of different social backgrounds worked within and without traditionally accepted paradigms of tea practice. The direct socioeconomic impact of the spread of tea is ultimately revealed in subsequent advances in women's labor opportunities and an increase in female social mobility. Through their participation in chanoyu, commoner women were able to blur and lessen the status gap between themselves and women of aristocratic and samurai status. *Cultivating Femininity* offers a new perspective on the prevalence of tea practice among women in modern Japan. It presents a fresh, much-needed approach, one that will be appreciated by students and scholars of Japanese history, gender, and culture, as well as by tea practitioners.
