The Ciris has received a certain amount of scholarly attention during the twentieth century, but on the whole has failed to meet with an adequate appreciation. This book aims to vindicate the Ciris, mainly by exploring its use of pre-Virgilian poetic texts largely ignored in previous scholarship. The core of the book consists of a discursive literary commentary, divided into chapters that examine consecutively the poem's main narrative units. Viewing allusion and allegory as intrinsic features of poetic composition rather than mere artistic devices, the book explores, among more prominent intertexts, Apollonius' Argonautica and Callimachus' Hecale, Lucretius and Catullus 64. Allusions are also suggested to Homer and Empedocles, Theocritus, Moschus, and Bion, Nicander and Euphorion, Choerilus of Samos and Asius of Samos, Ennius and Cicero. Through its intricate web of references to poetic intertexts, the Ciris, it is argued, creates an implicit allegorical pattern with an original poetological message. Allusion and Allegory is thus the first book-length study to offer a coherent literary interpretation of this controversial poem.

'In this book, you will travel in both space and time, starting in the years around the First World War and moving all the way up to the present day. As you go, you will see just what our pioneering aviators saw as they stared out from their cockpits. And, more than that, you will explore what they were trying to find. Because, from above, Scotland can be many different things, depending on what you choose to look at - and who is doing the looking.' Accompanying the BBC documentary series Scotland from the Sky, this lavishly illustrated book draws on the vast collection of aerial photography held in the archives of Historic Environment Scotland. Historian and series presenter James Crawford opens an extraordinary

window into our past to tell the remarkable story of a nation from above - taking readers back in time to show how our great cities have dramatically altered with the ebb and flow of history, while whole communities have vanished in the name of progress. The book shows how aerial imagery can reveal treasures from the ancient past, uncovering secrets buried right beneath our feet. And it demonstrates how the view from above has been at the heart of the postwar transformation of both our countryside and our urban landscapes. This is a fascinating - and little known - story of war, innovation, adventure, cities, landscapes and people. This is the story of Scotland, from the sky.

The final volume of "The Sky Crawlers" series (the masterpieces of Dr. MORI, Hiroshi) is the only short story compilation. Episodes 1-3 of the eight short stories are featured in this book. "Episode 1: Gyroscope" depicts the day-to-day interactions between Kusanagi, a pilot who is brought in to promote the company she belongs to, and Sasakura, a mechanic who supports her. In "Episode 2: Nine Lives", a vivid contrast between life and death emerges through the everyday and extraordinary life of a pilot, who is known for painting a black cat symbol on the cowling of his fighter aircraft. "Episode 3: Waning Moon" reveals the dark secret of the ship's vice-captain, who rescues a pilot from an aircraft that has crashed into the sea, and then the clean and tranquil state of his mind that he finally reaches at the end. Here is the key to unlocking the mystery of "The Sky Crawlers" series, which continues to comfortably dazzle readers with the high level of abstraction!

The Yearbook of Astronomy 2022 is the Diamond Jubilee edition of this iconic publication, the annual appearance of which has been eagerly anticipated by astronomers, both amateur and professional, ever since this invaluable book first appeared in 1962. As the preface to the 1962 edition informed its readers, the post-war years had seen a tremendous growth of interest in astronomy and space research. Doubtless fueled by the dawn of the Space Age, the launch of Sputnik 1 in October 1957 marked a significant change in the course of history. This epoch-making event, coupled with the subsequent flights of Soviet cosmonaut Yuri

life of serial killer Ed Gein. Packed with exclusive interviews, rare and unseen pictures, and with a foreword from the chainsaw-wielding Leatherface himself, Gunnar Hansen! Many lights and other objects in the sky go unrecognised, or at least are little understood by those observing them. Such things range from the commonplace like rainbows and meteors, to the distinctly unusual like the green flash and ball lightning. And there is still a residuum of objects that remain unidentified by the watcher – classed generally as ‘UFOs’, a description which today has connotations of the mysterious, even of extraterrestrial visitors. The first part of this book is an identification guide, very much like the "plant identifier" sections found in a good gardening or botany book. It allows quick (and structured) identification of known aerial phenomena, whether at night or during the day. The objects thus found are referenced to the second part of the book... The second part gives a full description, physical explanation, and where relevant notes on observing and photographing the various phenomena. Some will need optical aids such as binoculars or telescopes, but the main thrust of the book is identification and explanation rather than imaging. The final chapter approaches UFOs from a scientific standpoint, particularly the way in which human perception and often preconception affects the outcome. It does however finish with a short section on "extraterrestrial UFOs", emphasising the burden of proof aspect and touching on the scientific theories of life on other worlds and the improbability of visitors.

The result of an exhaustive study of Sir Patrick Moore's observations of the Moon and planets for more than 60 years, this book is a fantastic companion to the extremely popular, "It Came From Outer Space Wearing an RAF Blazer!" written by the same author. Moore recorded his telescopic observations in his logbooks, which are reproduced and

described here in detail, along with his sketches and notes. In this light, the author discusses the factors that caused Moore to switch from lunar observing to planetary and variable star observing. He has also included personal recollections and humorous anecdotes from Moore's friends and acquaintances, as well as a look at his best loved books. Further chapters describe Moore's foreign travels and correspondence with those back home. Lastly, the author has not neglected a few of Moore's most memorable television and radio appearances, which are examined along with a close up of what it was like to visit Moore's beloved home of Farthings in Selsey. Essentially, this is a book written by popular demand from the readers of the author's original biography, who craved more of Moore!

Presenting original research studies by leading scholars in the field, *Orders of Ordinary Action* considers how ethnomethodology provides for an 'alternate' sociology by respecifying sociological phenomena as locally accomplished members' activities. Following an introduction by the editors and a seminal statement of ethnomethodology's

analytic stance by its founder, Harold Garfinkel, the book then comprises two parts. The first introduces studies of practical action and organization, whilst the second provides studies of practical reasoning and situated logic in various settings. By organizing the book in this way, the collection demonstrates the relevance of ethnomethodological investigations to established topics and issues and indicates the contribution that ethnomethodology can make to the understanding of human action in any and all social contexts. Both individually and collectively, these contributions illustrate how taking an ethnomethodological approach opens up for investigation phenomena that are taken for granted in conventional sociological theorizing.

Re-Creating Primordial Time offers a new perspective on the Maya codices, documenting the extensive use of creation mythology and foundational rituals in the hieroglyphic texts and iconography of these important manuscripts.

Focusing on both pre-Columbian codices and early colonial creation accounts, Vail and Hernández show that in spite of significant cultural change during the Postclassic and Colonial periods, the mythological traditions reveal significant continuity, beginning as far back as the Classic period. Remarkable similarities exist within the Maya tradition, even as new mythologies were introduced through contact with the Gulf Coast region and highland central Mexico. Vail and Hernández analyze the extant Maya codices within the context of later literary sources such as the Books of Chilam Balam, the Popol Vuh, and the Códice Chimalpopoca to present numerous examples highlighting the relationship among creation mythology, rituals, and lore.

Patrick Hamilton may be best known now for the plays *Rope* and *Gaslight* and for the classic Alfred Hitchcock and George Cukor movies they inspired, but in his heyday he was no less famous for his brooding tales of London life. Featuring a Dickensian cast of pubcrawlers, prostitutes, lowlifes, and just plain losers who are looking for love—or just an ear to bend—Hamilton's novels are a triumph of deft characterization, offbeat humor, unlikely compassion, and raw suspense. In recent years, Hamilton has undergone a remarkable revival, with his champions including Doris Lessing, David Lodge, Nick Hornby, and Sarah Waters.

Twenty Thousand Streets Under the Sky is a tale of obsession and betrayal that centers on a seedy pub in a run-down part of London. Bob the waiter skimps and saves and fantasizes about writing a novel, until he falls for the pretty prostitute Jenny and blows it all. Kindly Ella, Bob's co-worker, adores Bob, but is condemned to enjoy nothing more than the attentions of the insufferable Mr. Eccles; Jenny, out on the street, is out of love, hope, and money. We watch with pity and horror as these three vulnerable and yet compellingly ordinary people meet and play out bitter comedies of longing and frustration.
