John Ray (1627–1705) contributed several important concepts to the field of plant taxonomy: first, the division of plants into groups based on seed leaves (Monocotyledonae and Dicotyledonae); second, the differentiation between flowering and flowerless plants; third, the use of the term "petal" to designate the

“leaf ” of the flower; fourth, the use of stamens and pistils in plant classification, anticipating the emphasis of Linnaeus. Ray worked towards a natural classification of plants that was based on more than one “data set”: classification should not use a single character but ideally should make use of as much information as was available for as many parts of the plant as possible. In this way his work foreshadowed that of Lamarck, de Jussieu and de Candolle in France, and then Bentham and Hooker in England. He worked to popularise the study of plants, to bring it to the level of science, and to systematise previous knowledge of plants into a workable whole. If not for the innovative use of binomials by Linnaeus, perhaps John Ray might have been more widely remembered as the true “Father of Plant Taxonomy”. Ray sets out his 'new' classification of plants in *Methodus Plantarum Nova* and discusses some basic aspects of their biology. This book is its first English translation: though occupying an important place in the history of Botany, hitherto it has been available only in its original language, Latin.

the second edition of 'Places of the Soul' has brought Christopher Day's classic text into the 21st century. This new edition of the seminal text reminds us that true sustainable design does not simply mean energy efficient building. Sustainable buildings must provide for the 'soul'. For Christopher Day architecture is not just about a building's appearance, but how the building is experienced. 'Places of the Soul' presents buildings as environment, intrinsic to their surroundings, and offers design principles that will open the eyes of the architecture student and professional alike, presenting ideas quite different to the orthodoxy of modern architectural education. Christopher Day's experience as an architect, self-builder, professor and sculptor have all added to the development of his ideas that encompass issues of economic and social sustainability, commercial pressures and consensus design. This book presents these ideas and outlines universal principles that will be of interest and value to architects, builders, planners and developers alike.

It is an age of hurry and worry. Fortunes are quickly made and freely spent. Nearly all busy, hard-worked Americans have an intuitive sense of the need that exists for at least one period of rest and relaxation during each year, and all—or nearly all—are willing to pay liberally, too liberally in fact, for anything that conduces to rest, recreation and sport. I am sorry to say that we mostly get swindled. To the man of millions it makes little difference. I do not write for him, and can do him little good. But there are hundreds of thousands of practical, useful men, many of them far from being rich; mechanics, artists, writers, merchants, clerks, business men—workers, so to speak—who sorely need and well deserve a season of rest and relaxation at least once a year. To these, and for these, I write. (George Washington Sears, Chapter I)
